

CLA and Bone Formation

**Bruce A. Watkins
Professor and Director**

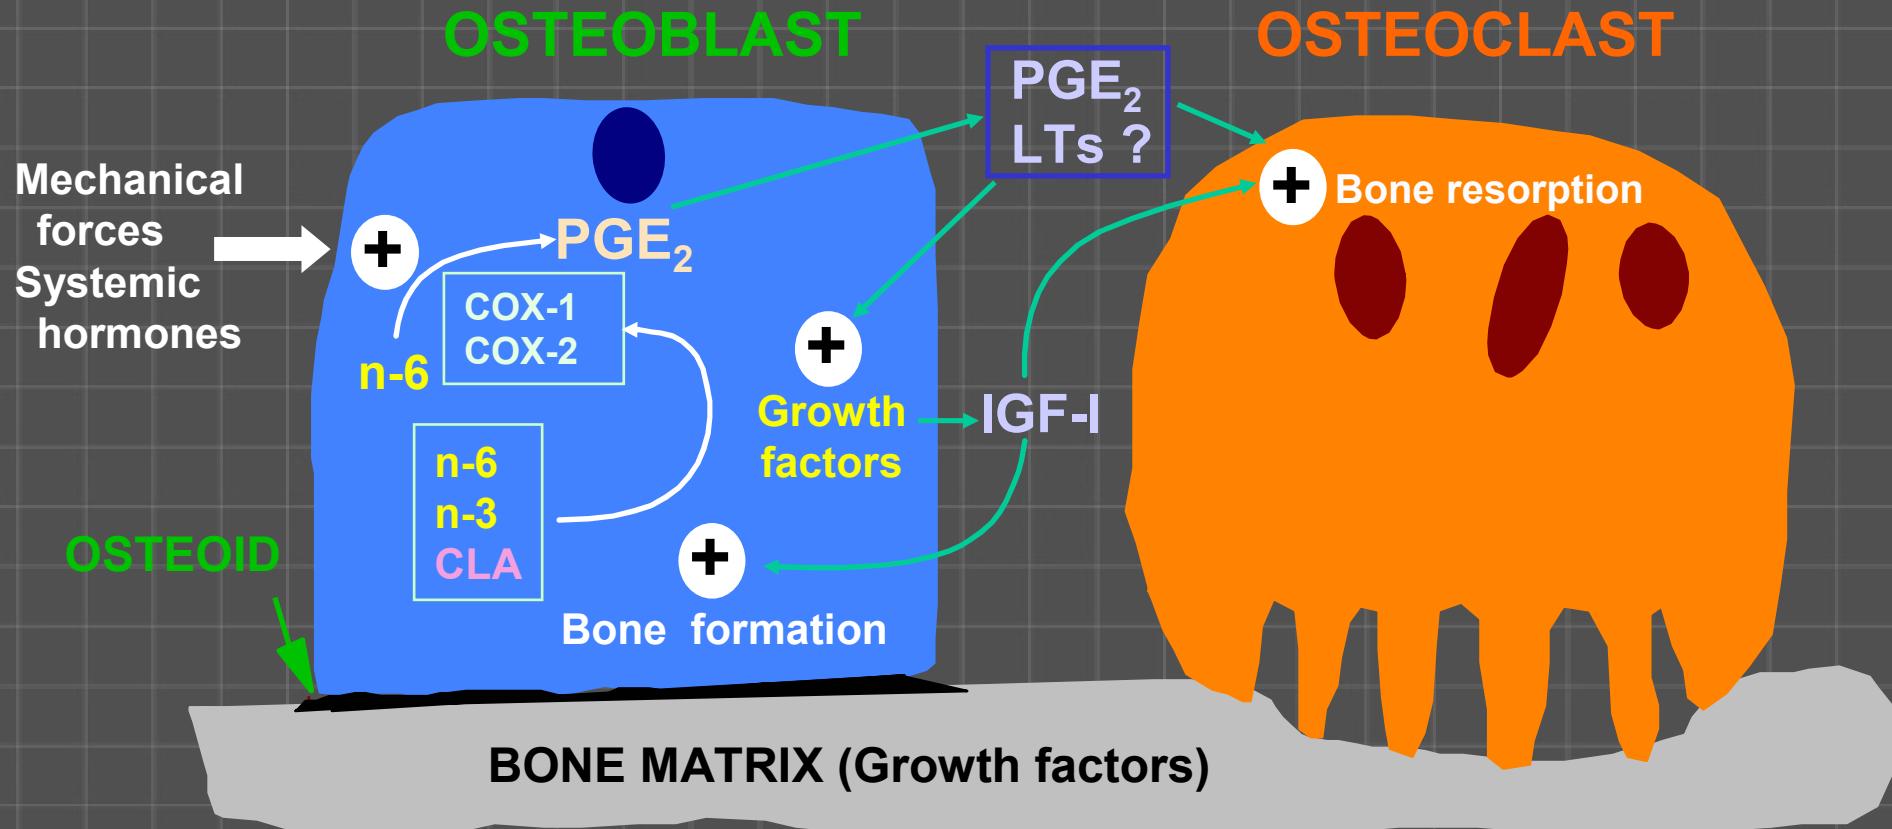

*Center for Enhancing Foods to Protect Health
Lipid Chemistry & Molecular Biology Laboratory*

CLA BONE 2002

Cells of the Bone Microenvironment: Local Factors Regulating Osteoblast and Osteoclast Functions (PGE_2 , orchestrates biochemical, physiological, molecular events)

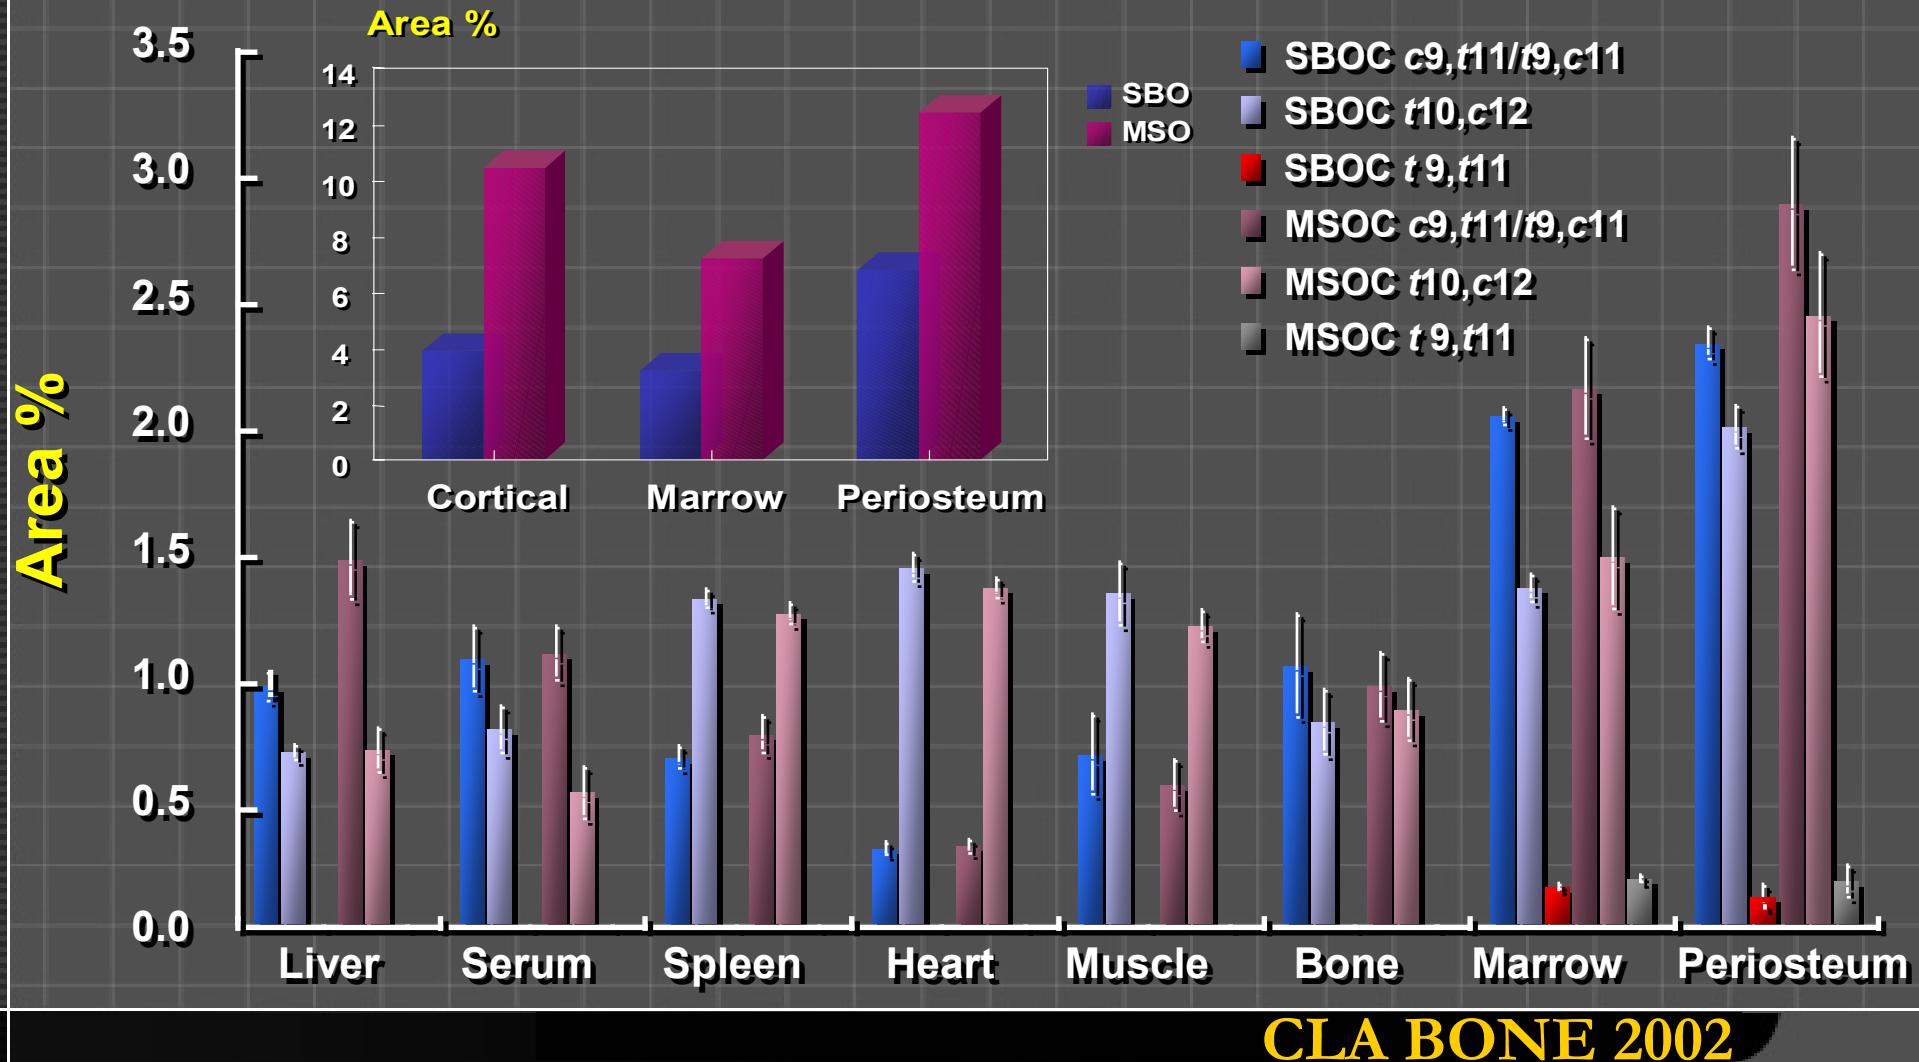

Studies on CLA and Bone Formation

Approach:

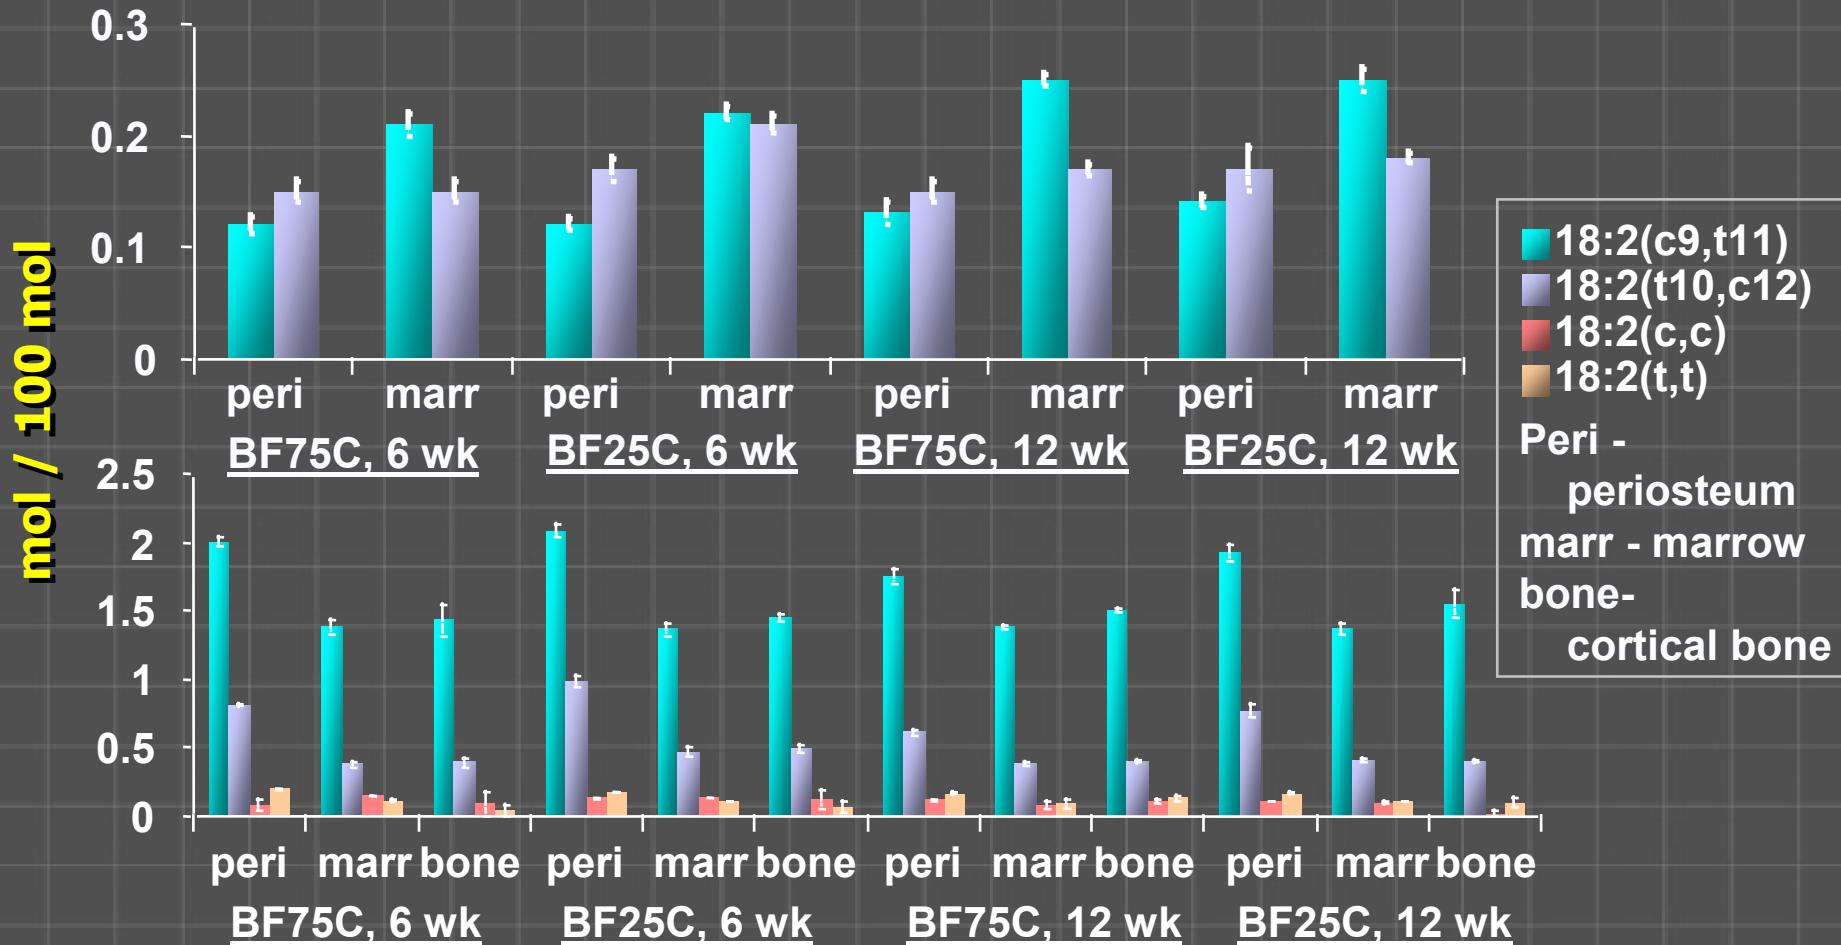

- **Characterization:** dietary fats alter the fatty acid composition of bone and cartilage compartments
- **Biochemical Factors:** prostaglandin E and insulin-like growth factors, osteocalcin, BALP
- **Functional Aspects:** bone formation rates, chondrocyte function, activity of osteoblast-like cells

Total n-3 PUFA in Rat Femur and CLA Enrichment of Rat Tissues

(Li and Watkins 1998, 1999)

Effect of Dietary CLA Isomers on Rat Tibia CLA Concentration

Dynamics of Bone Tissue

FUNCTIONS

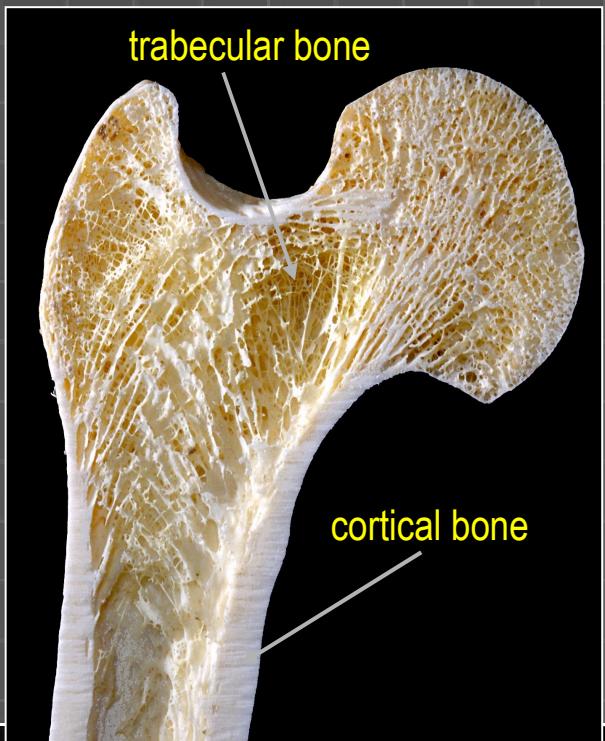

❖ Structural competency

- Support
- Locomotion
- Protection

❖ Metabolic efficiency

- Mineral reservoir
- Composite of cells

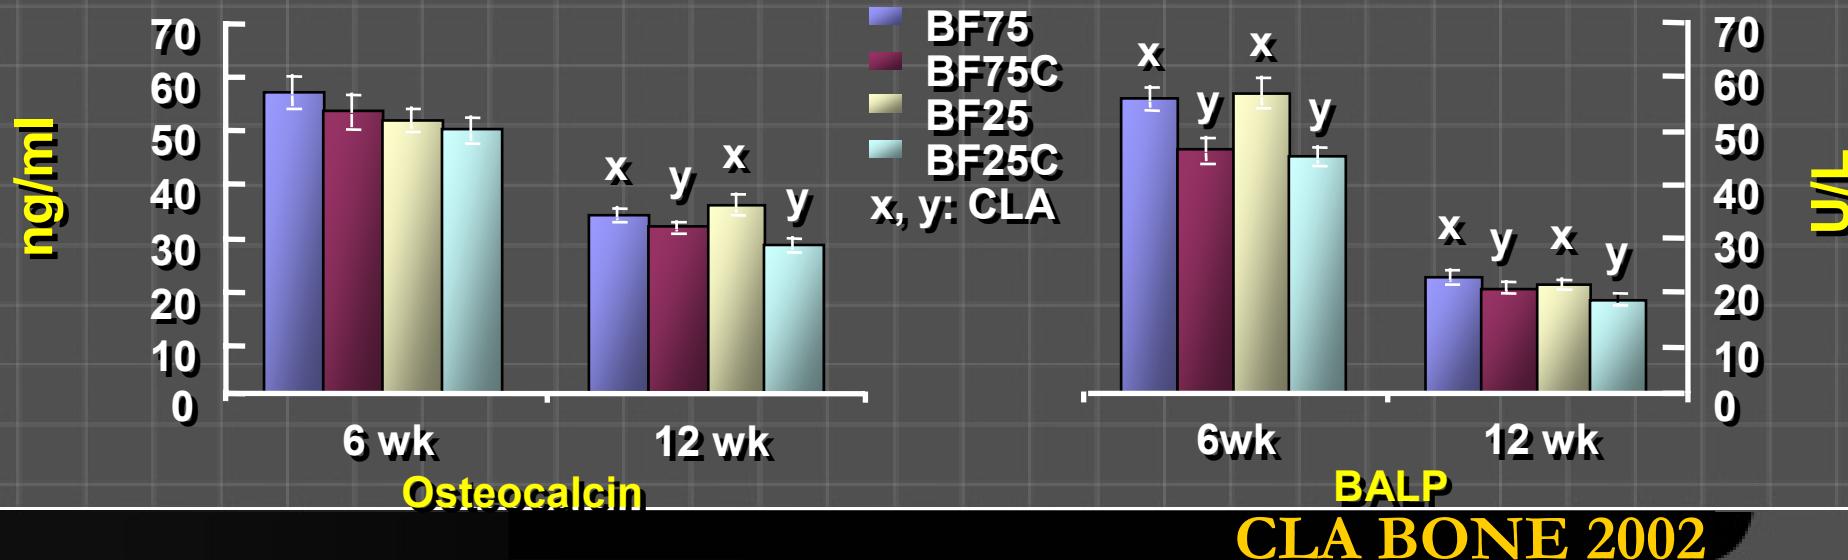

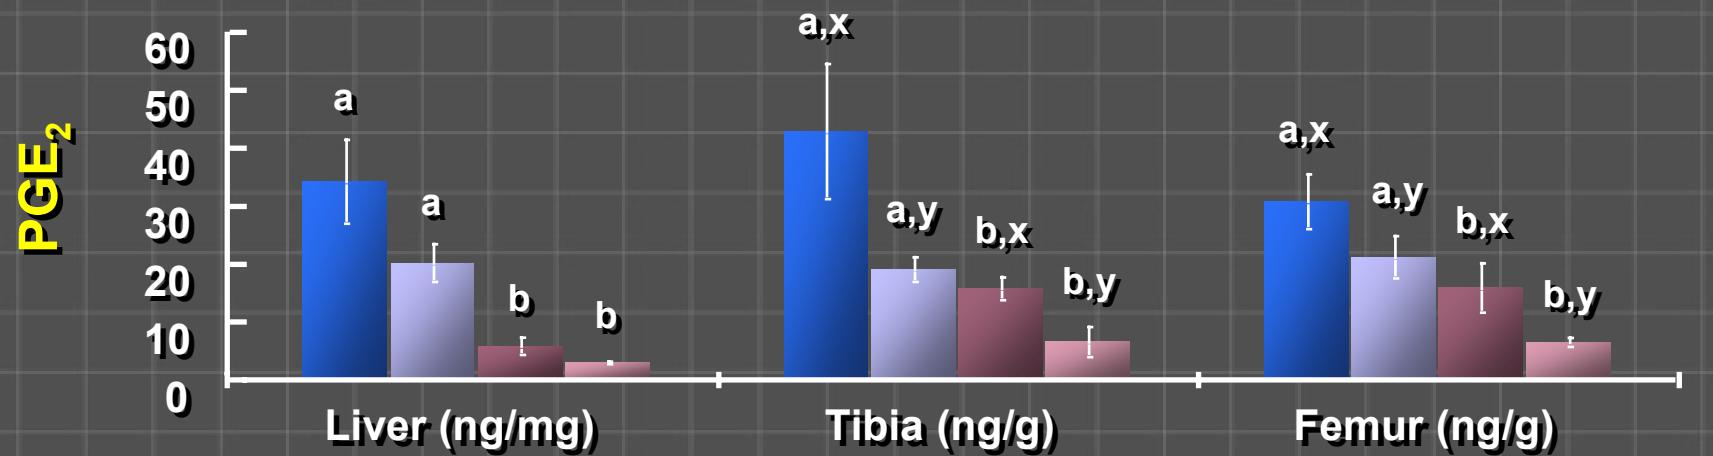

local growth factors
(e.g. IGF-I, IG-F-II, TGF- β)

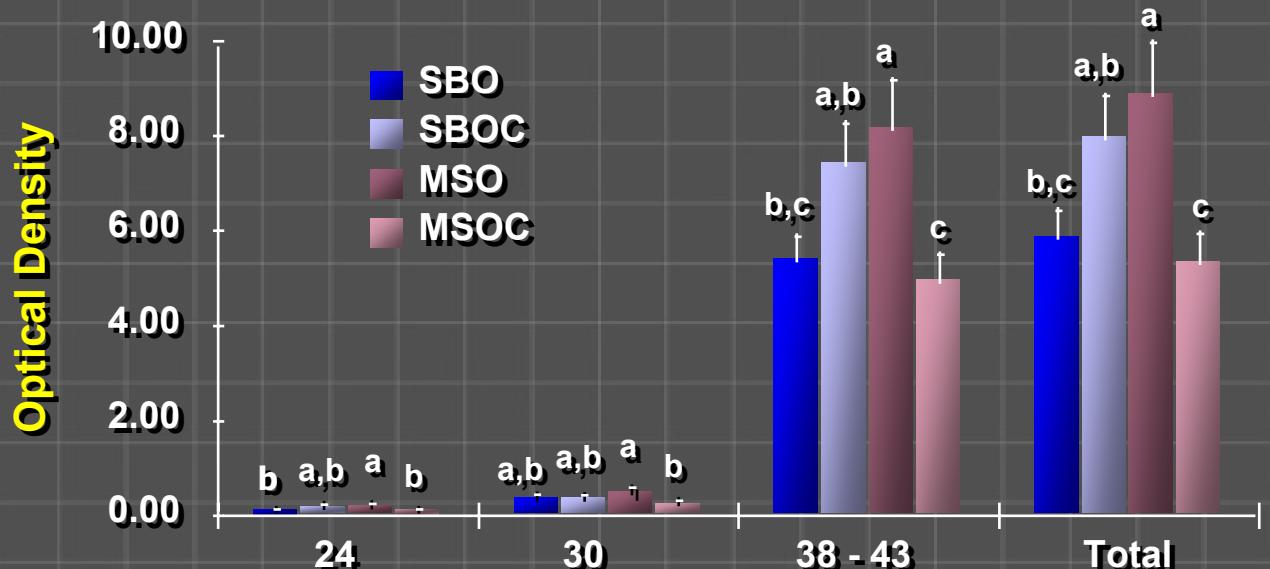

resorptive regulatory factors
(e.g. IL-I, TNF, EGF, PDGF)

mediatory factors
(cytokines, eicosanoids)

Effects of CLA and PUFA on Ex Vivo Bone PGE₂ Production, Serum Osteocalcin and Bone Specific Alkaline Phosphatase (BALP) in Rats

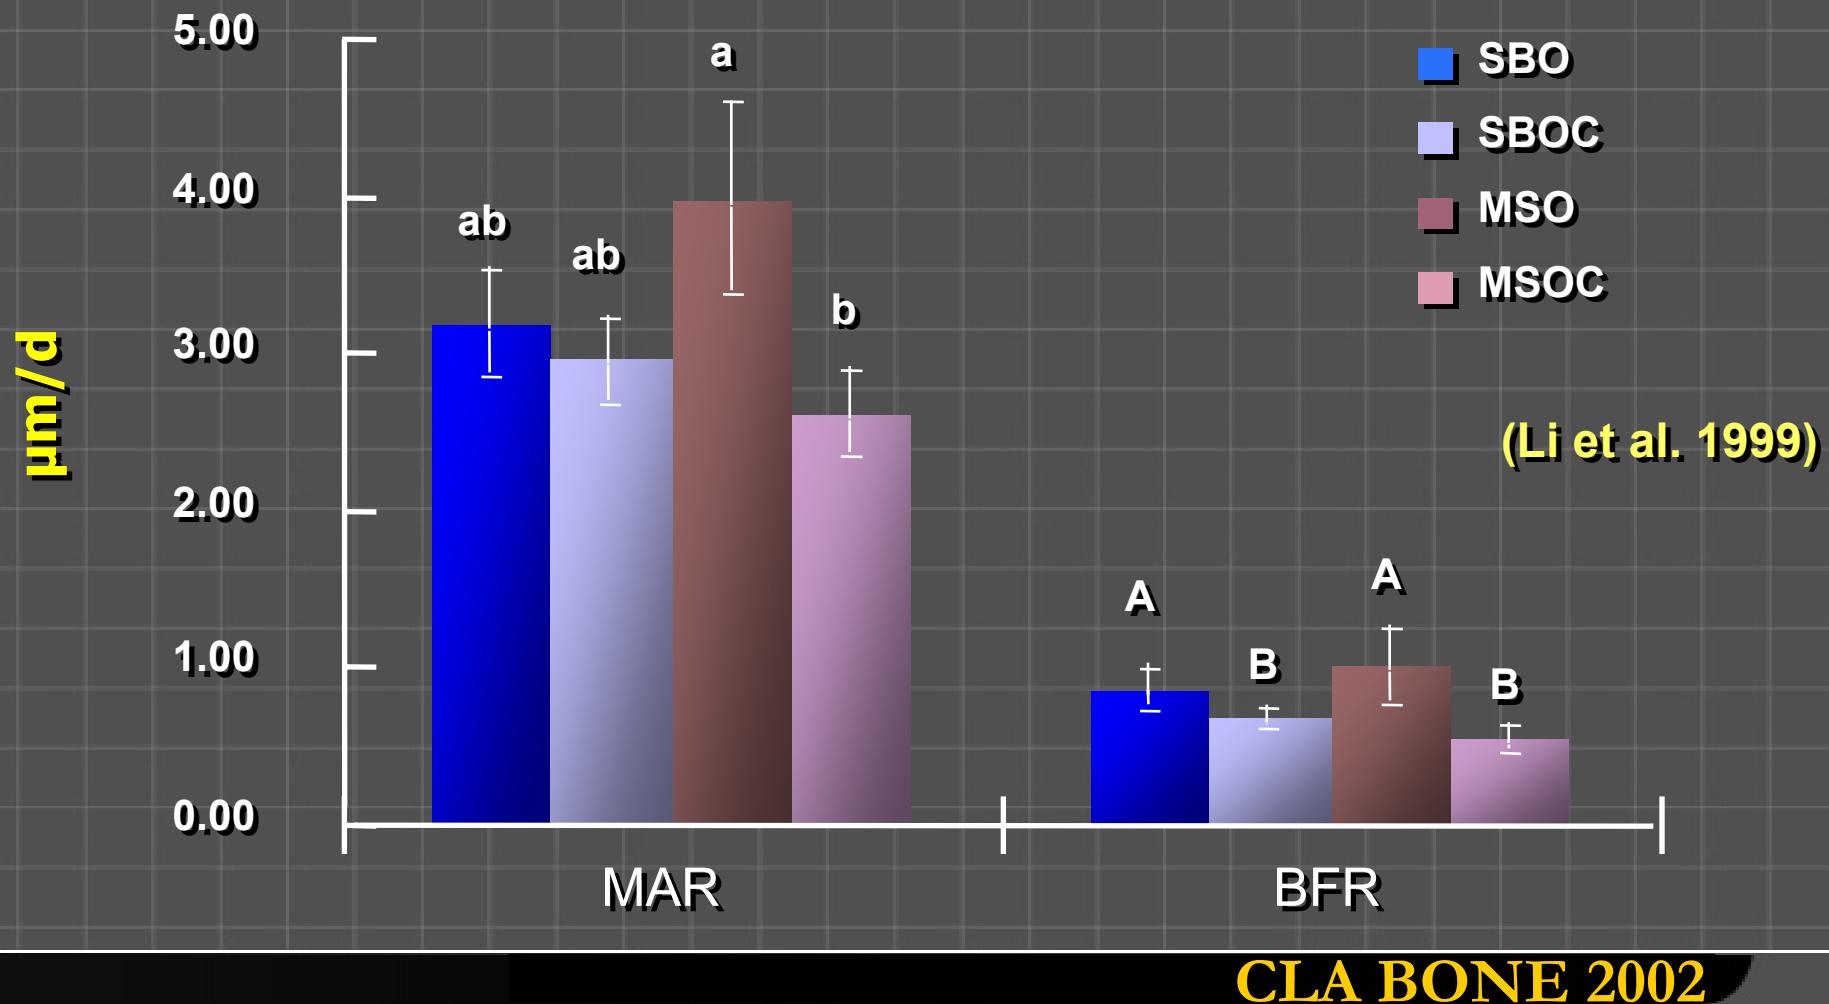

Effect of CLA and n-6, n-3 PUFA on IGFBPs in Rat Serum

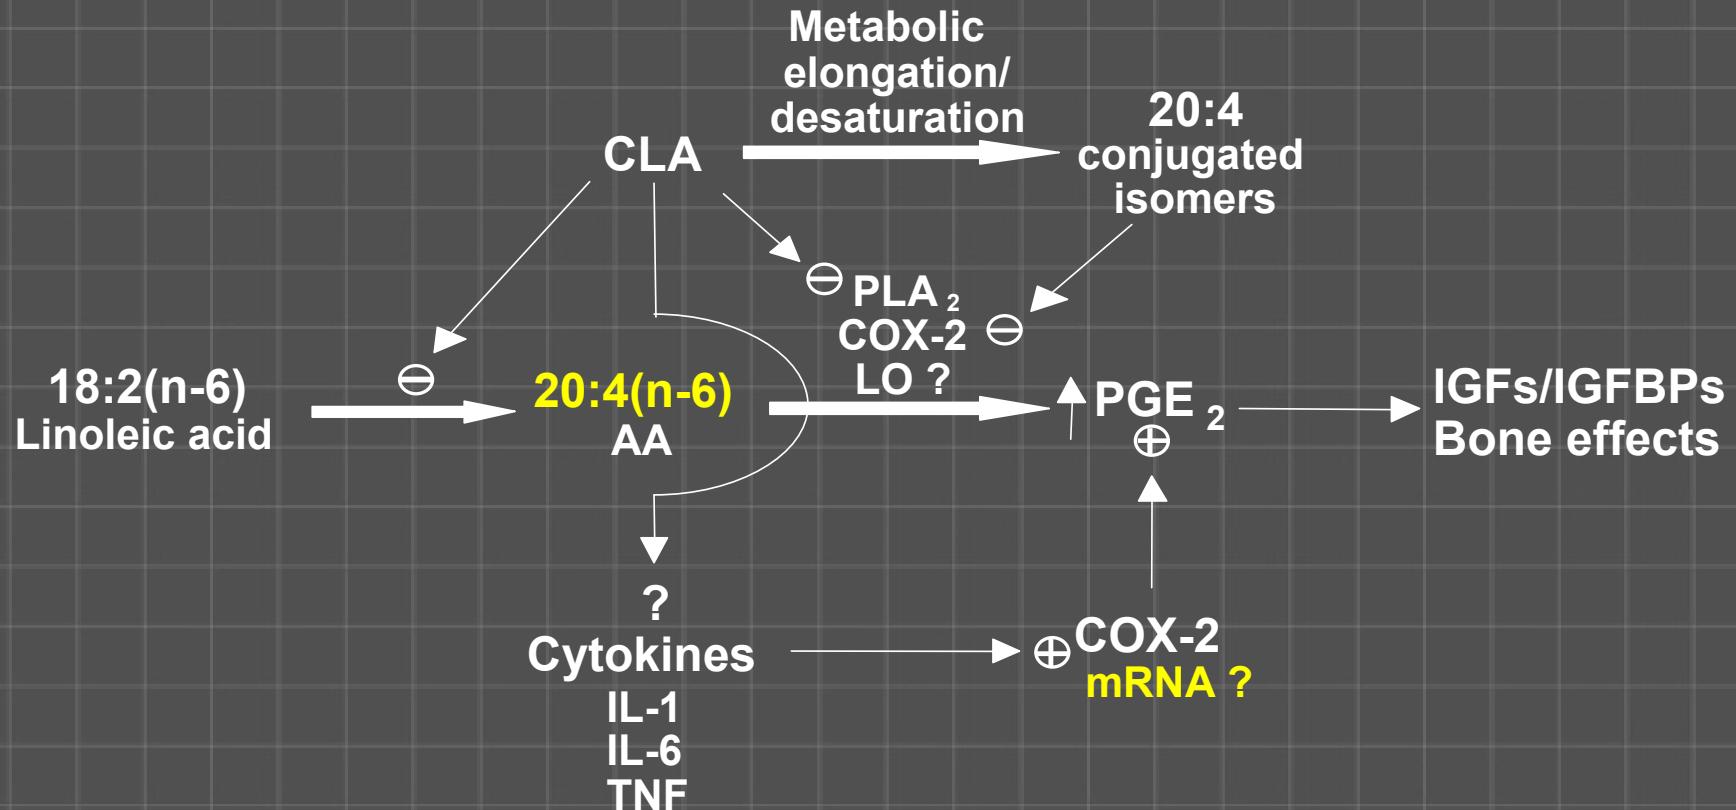

CLA BONE 2002

Effect of CLA and PUFA (n-6 & n-3) on Bone Formation (MAR and BFR) in Rats

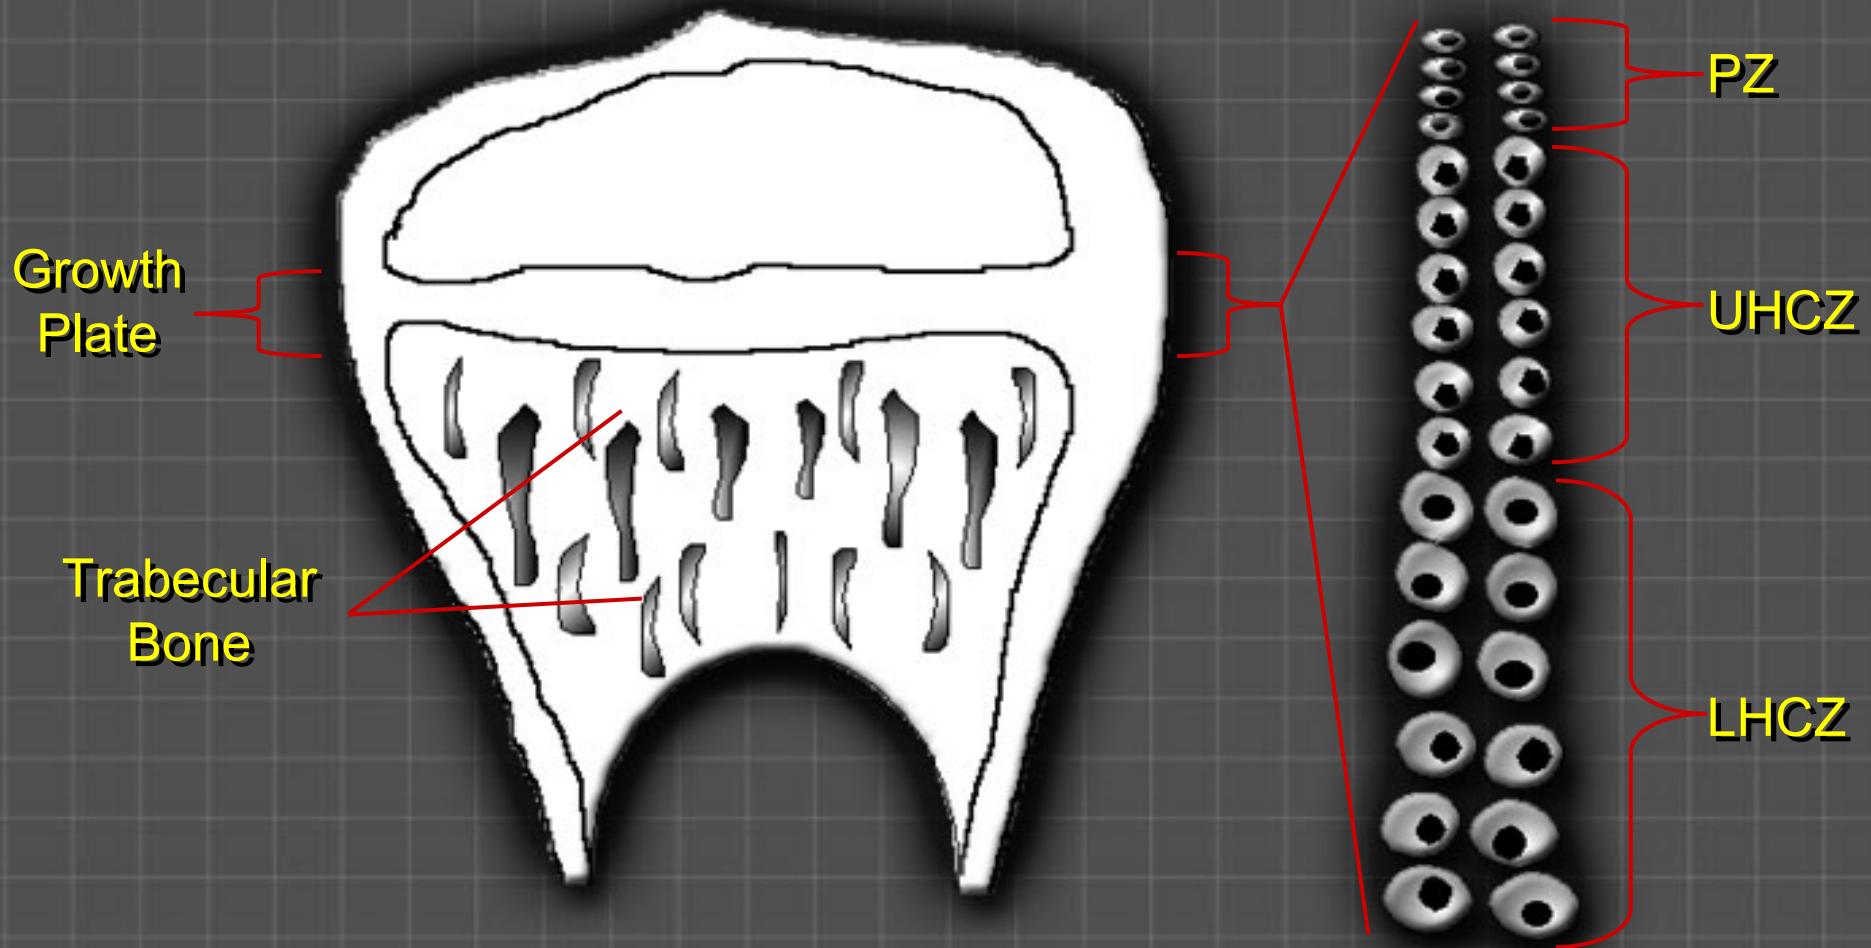

Proposed Actions of CLA on PGE₂ Production and Bone Metabolism

(Watkins et al. 1999)

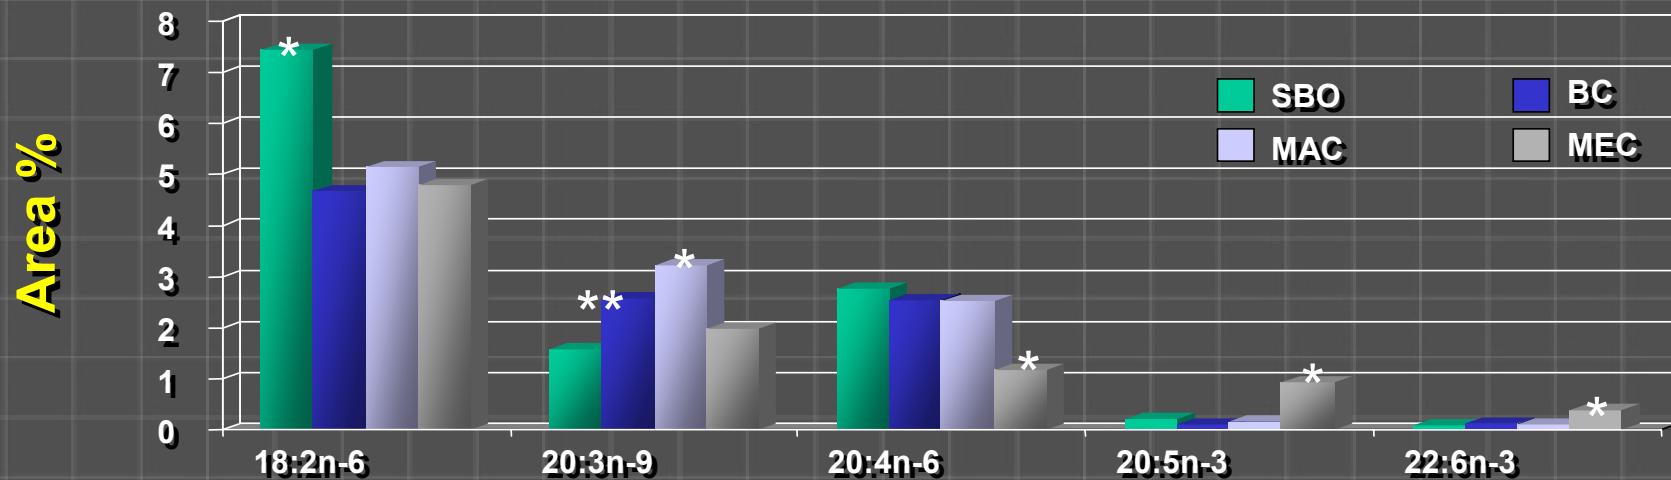

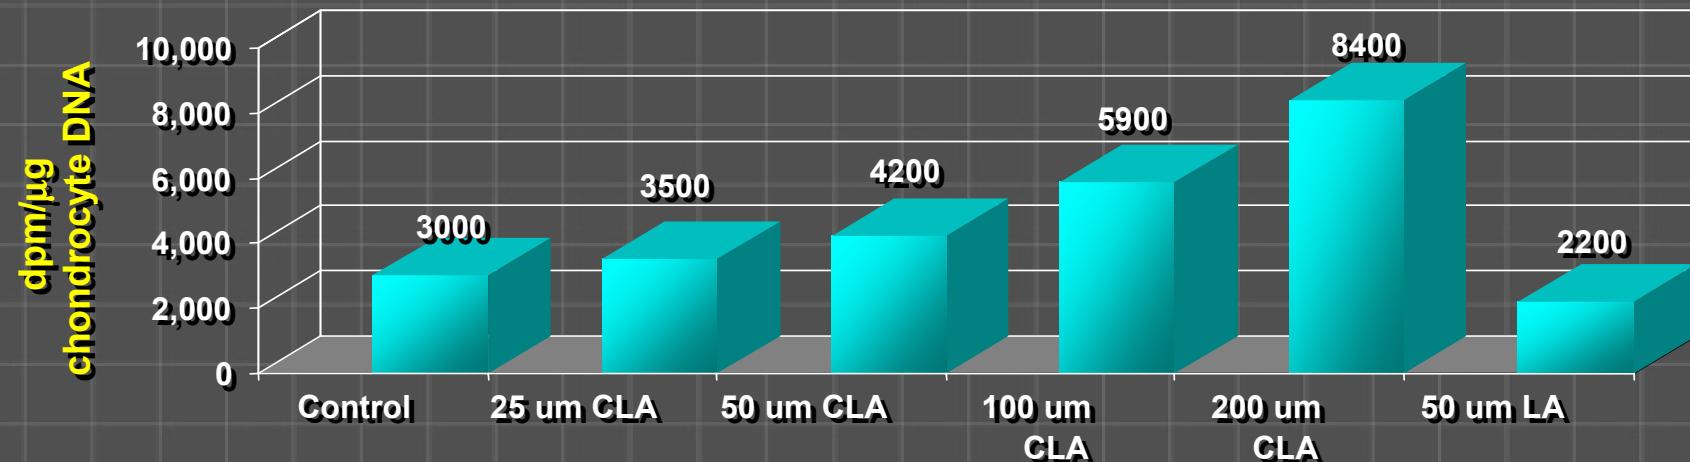

Epiphyseal Growth Plate Cartilage and Trabecular Bone

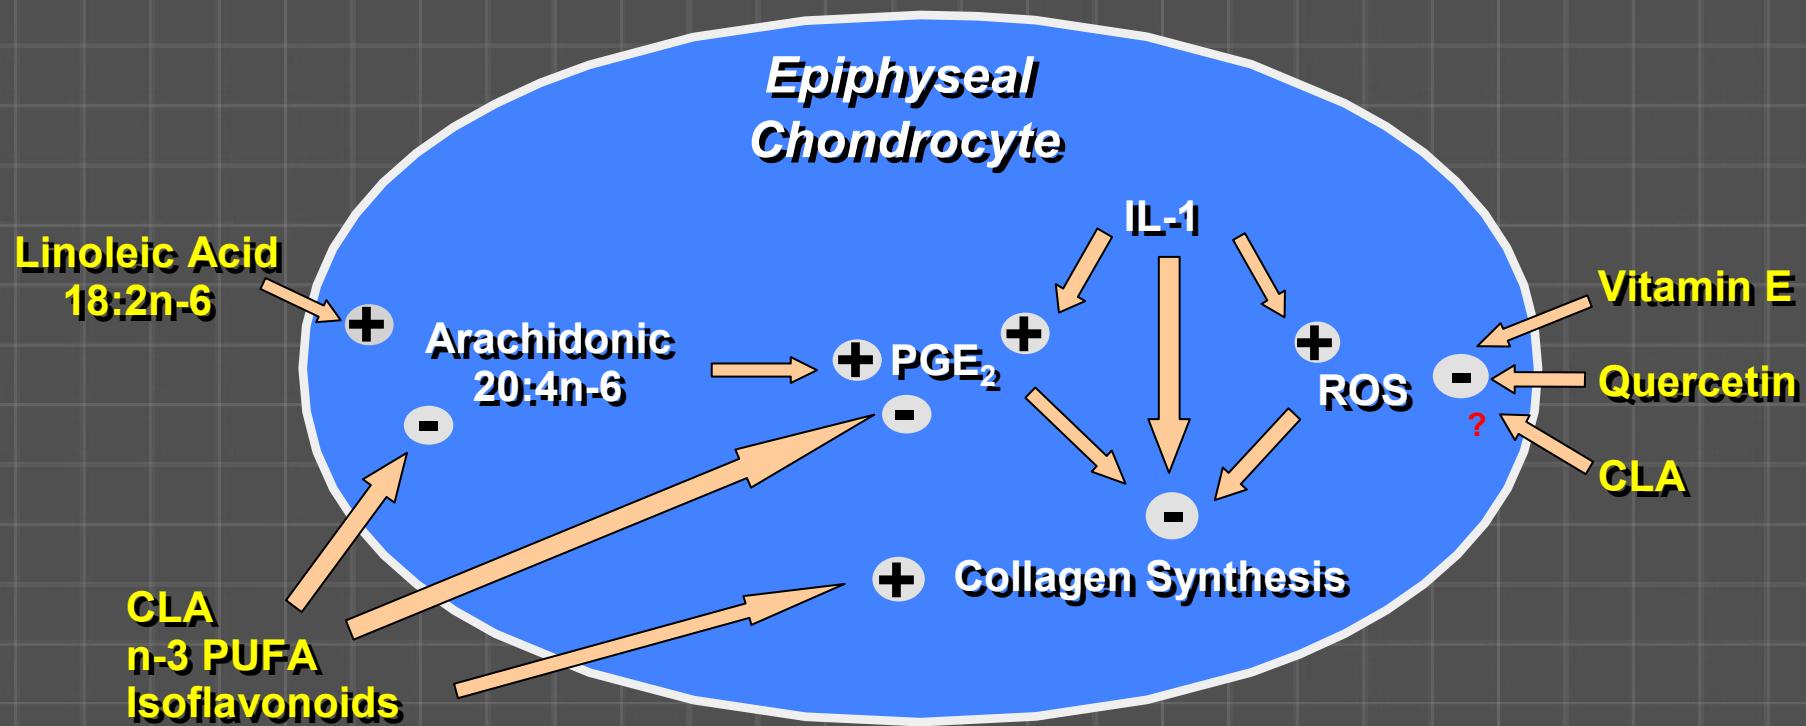

CLA and LA Effects on Epiphyseal Chondrocyte Function

(Xu et al. 1994)

Actions of Dietary PUFA, CLA and Antioxidants on Collagen Synthesis in Epiphyseal Chondrocytes

Model for Understanding the Mechanism of CLA Action on Bone Formation – Osteoblast (OB)

Purpose: to study the actions of PUFA on developmental regulation of bone modeling/remodeling, directing differentiation of progenitor cells, and to minimize bone loss

Targets: OB

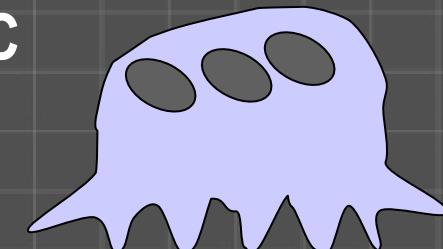

COX-2 - OB activity, chronic bone loss

Cbfa1 transcription factors - differentiation of OB

osteocalcin genes in OB - proliferation, maturation, mineralization

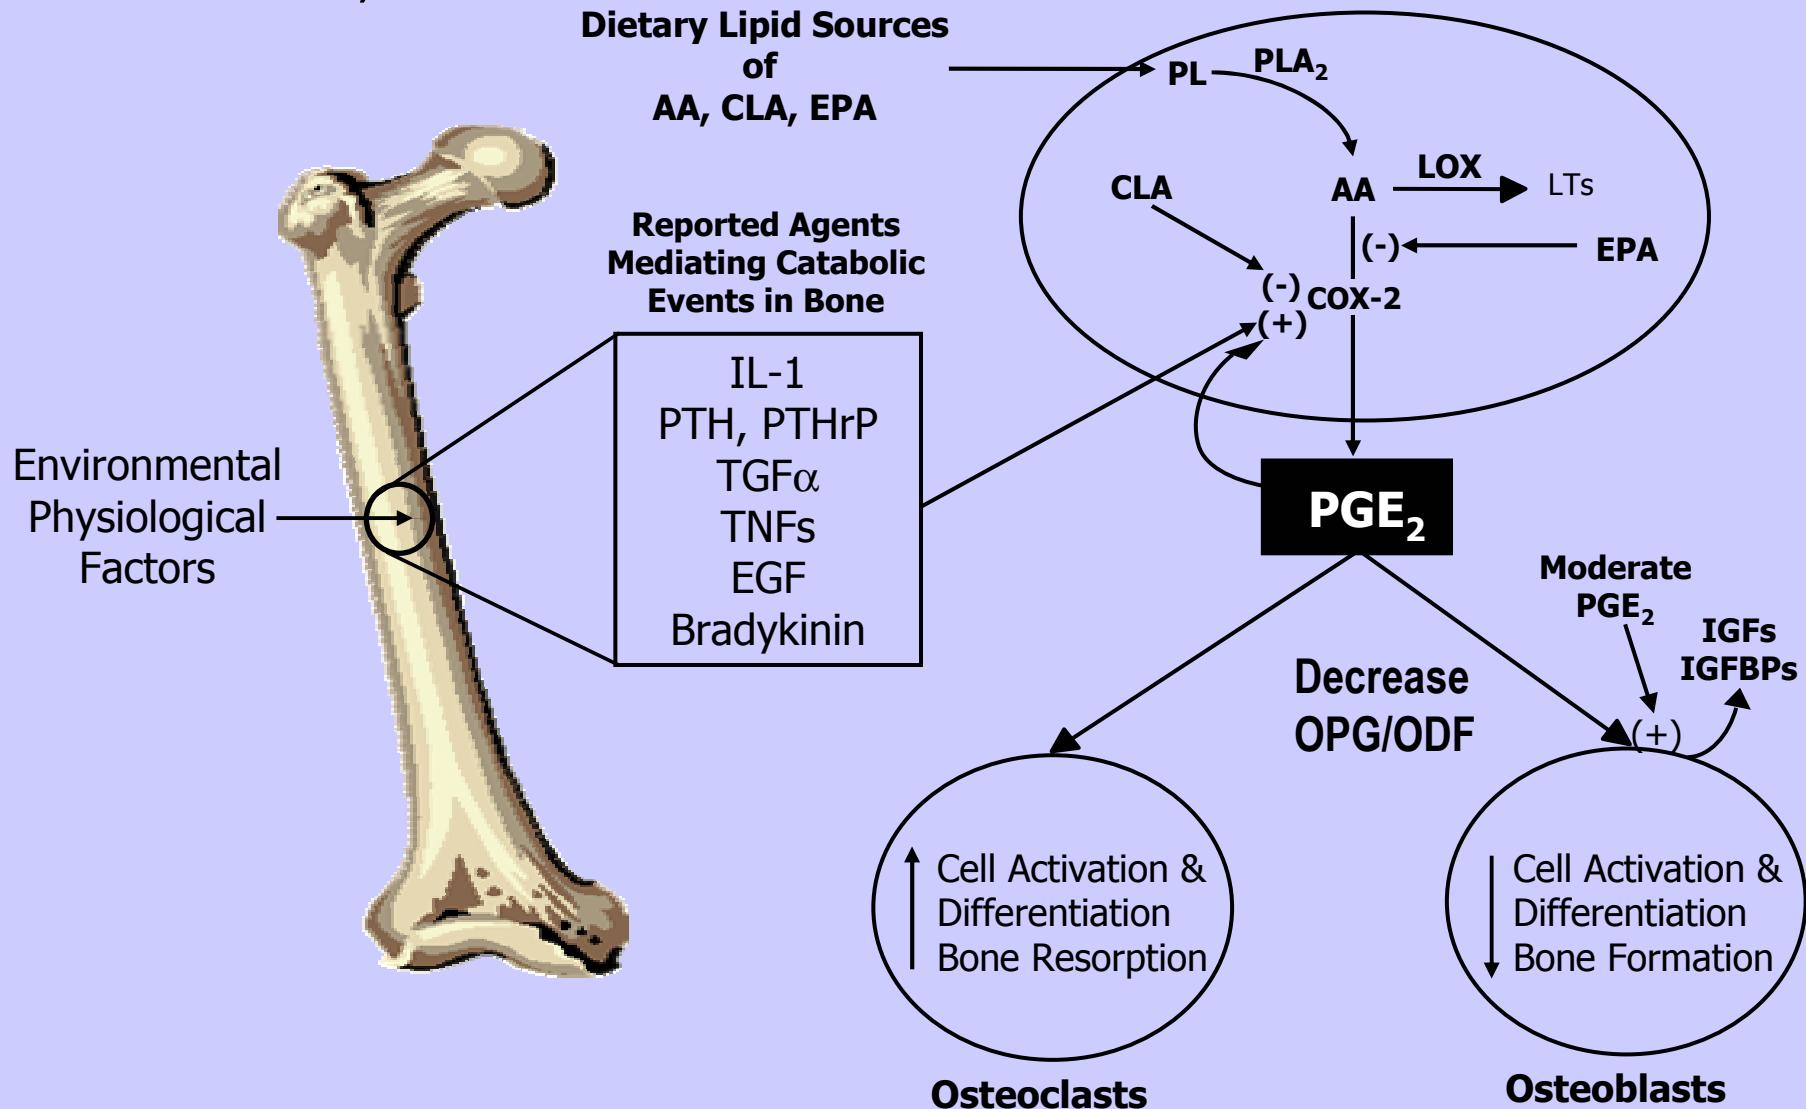

ODF and OPG signaling proteins - differentiation of OC

(Watkins et al. 2001 Exp Biol Med & Prog Lipid Res)

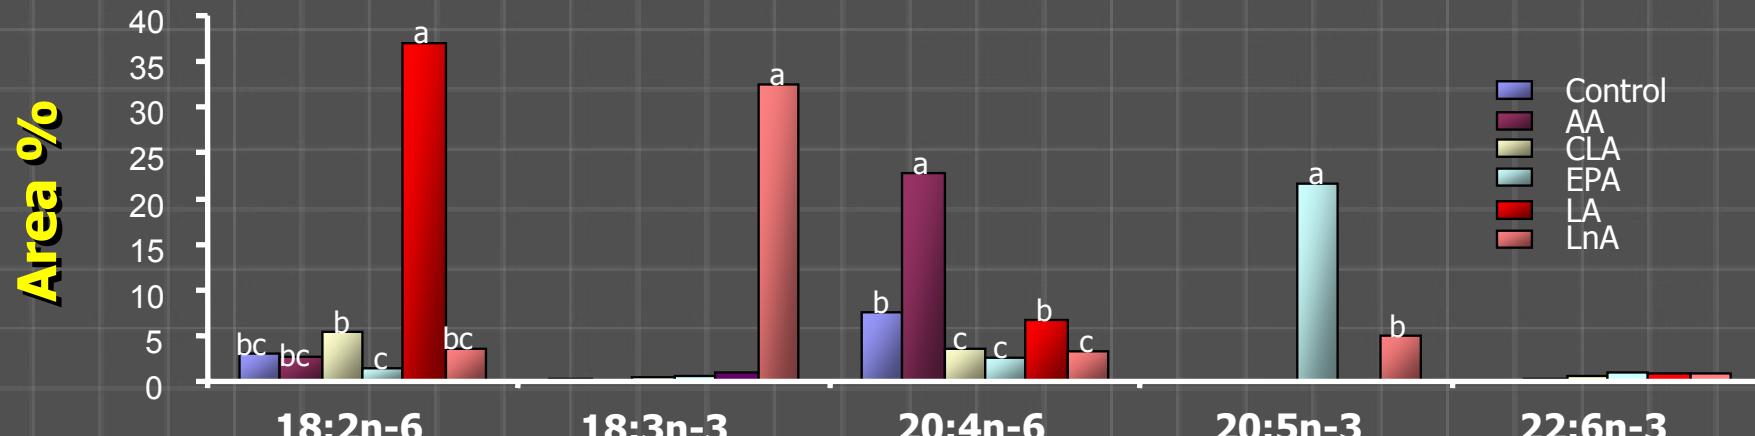

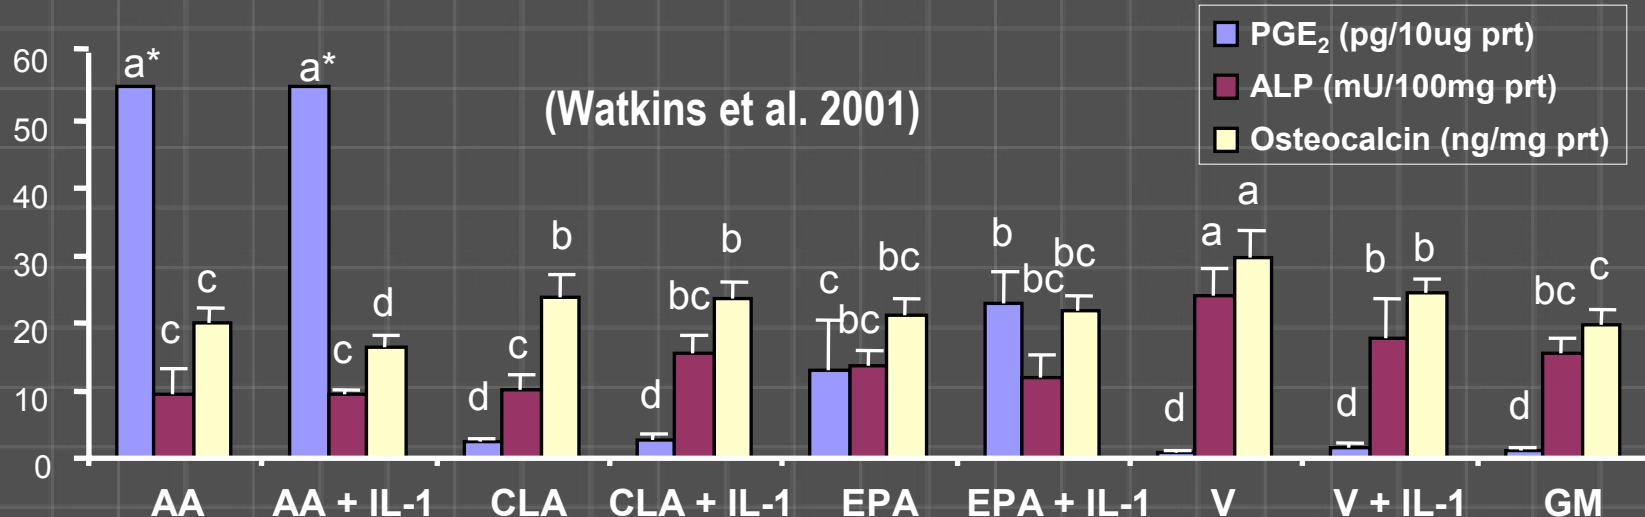

Molecular Targets for Moderating Catabolic Events in Aging Bone

(Watkins et al. 2001)

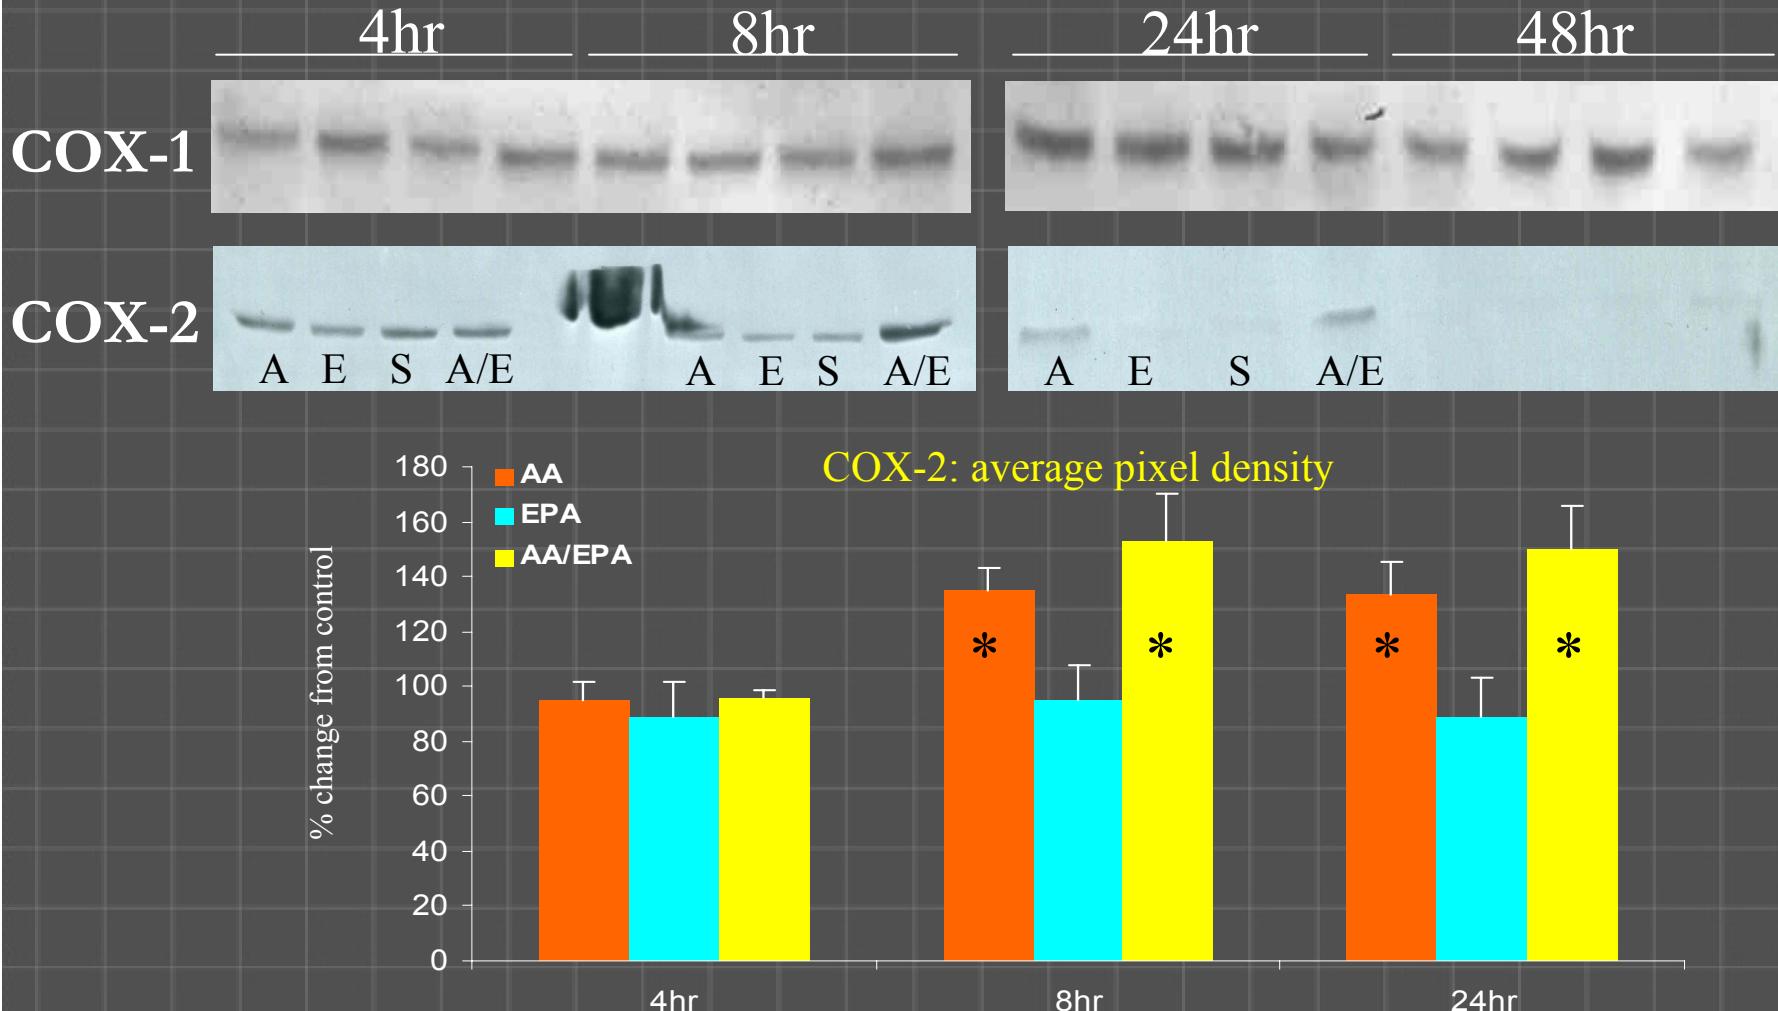

Osteoblast Activity (matrix/mineral formation)

Effects of PUFA (AA, EPA, CLA) on MC3T3-E1 Cells

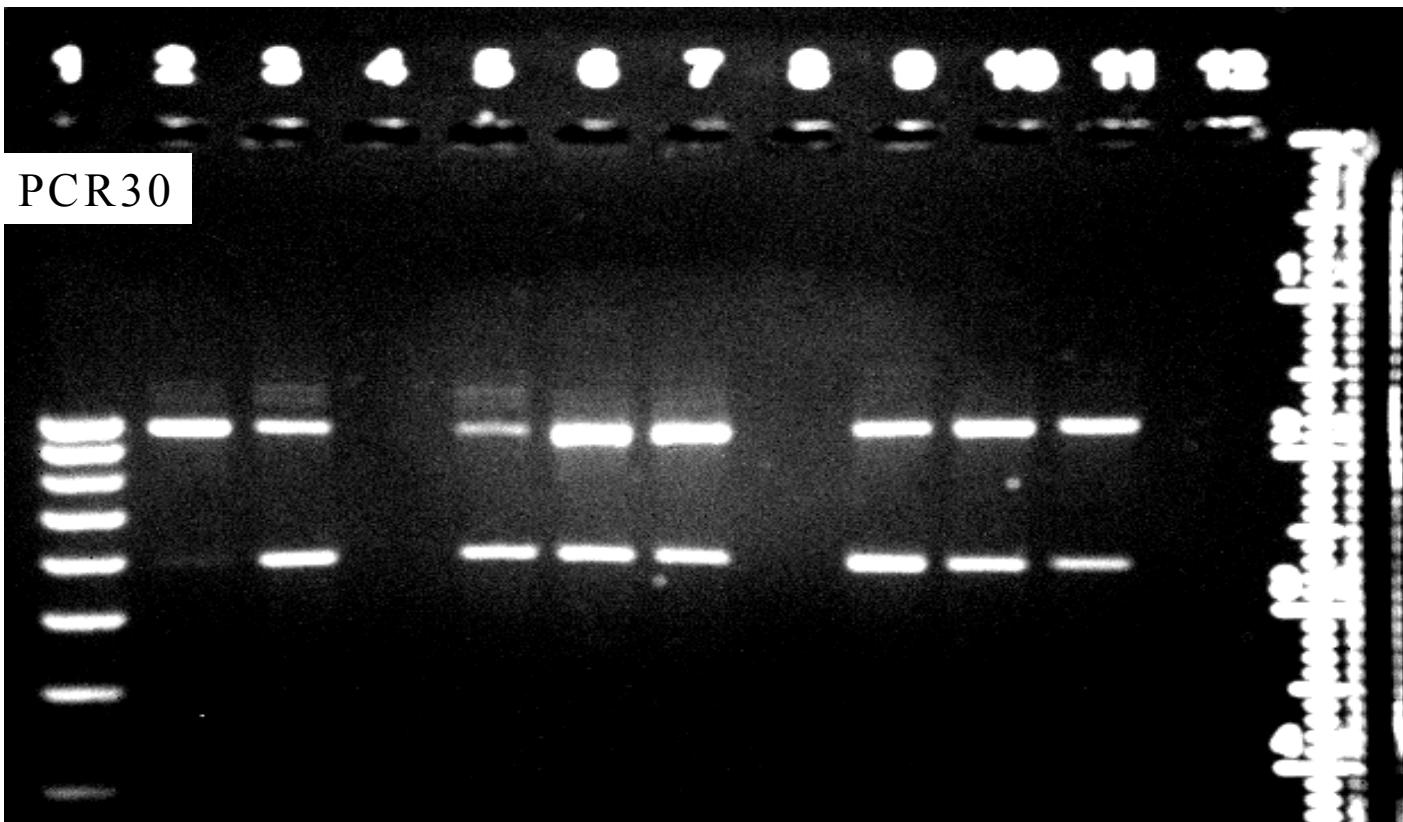

CLA BONE 2002

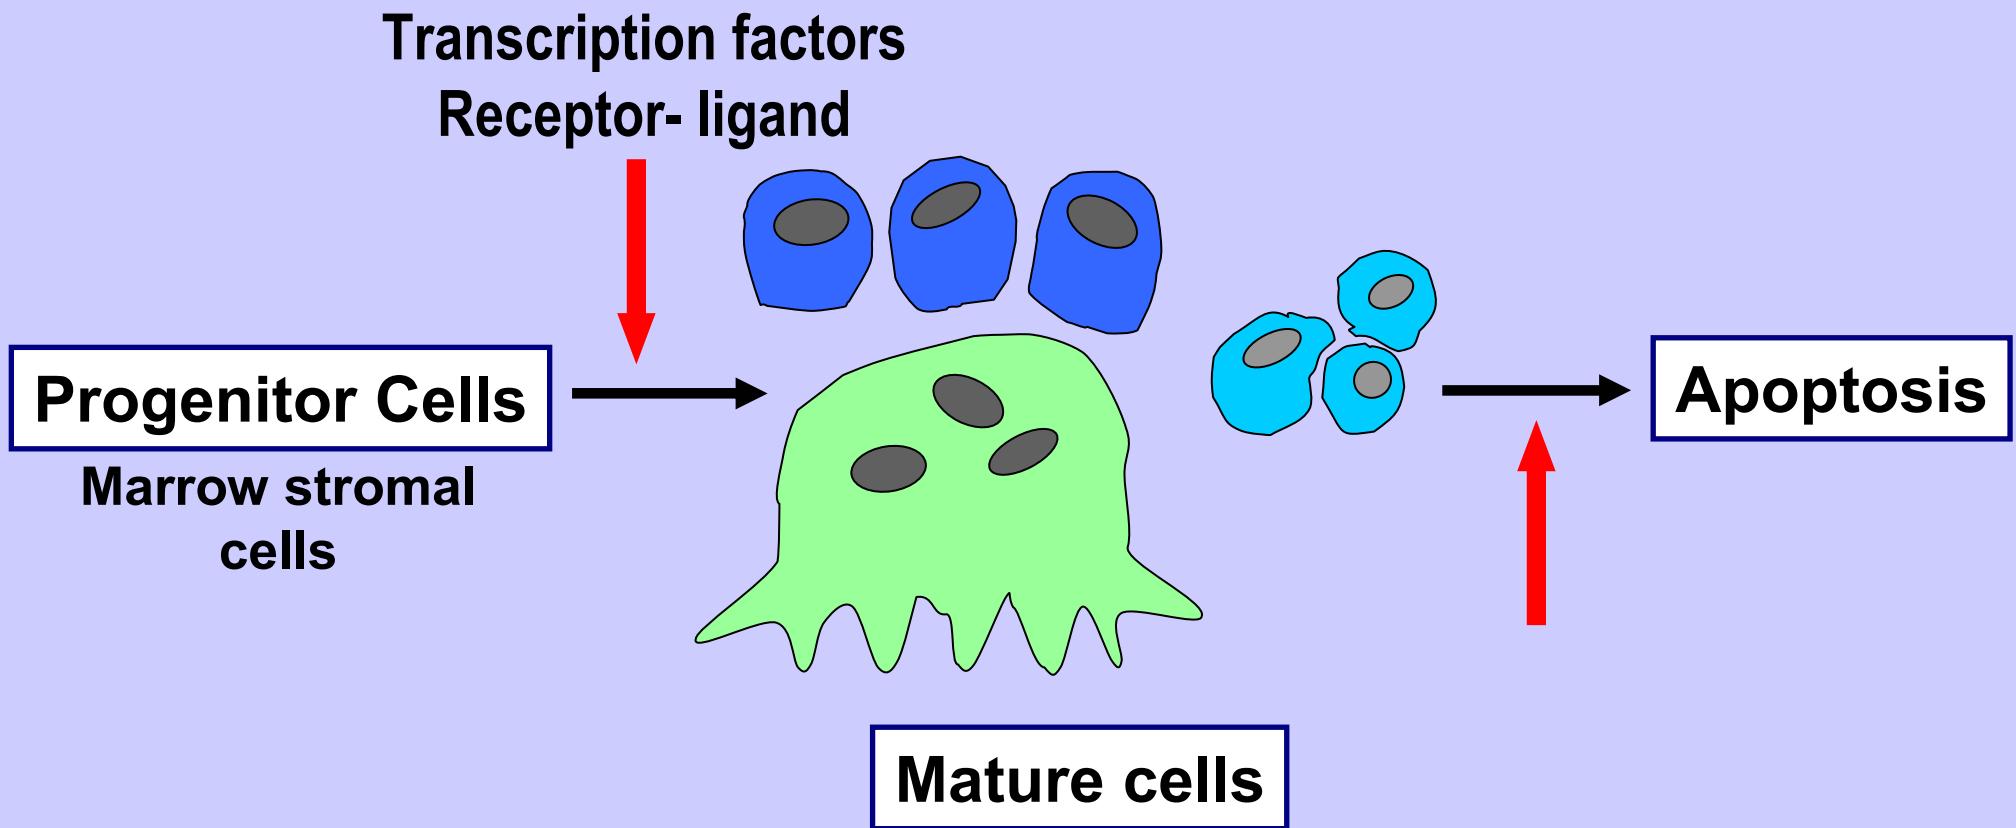

Osteoblast COX-2 Expression (PUFA Effects: AA, EPA)

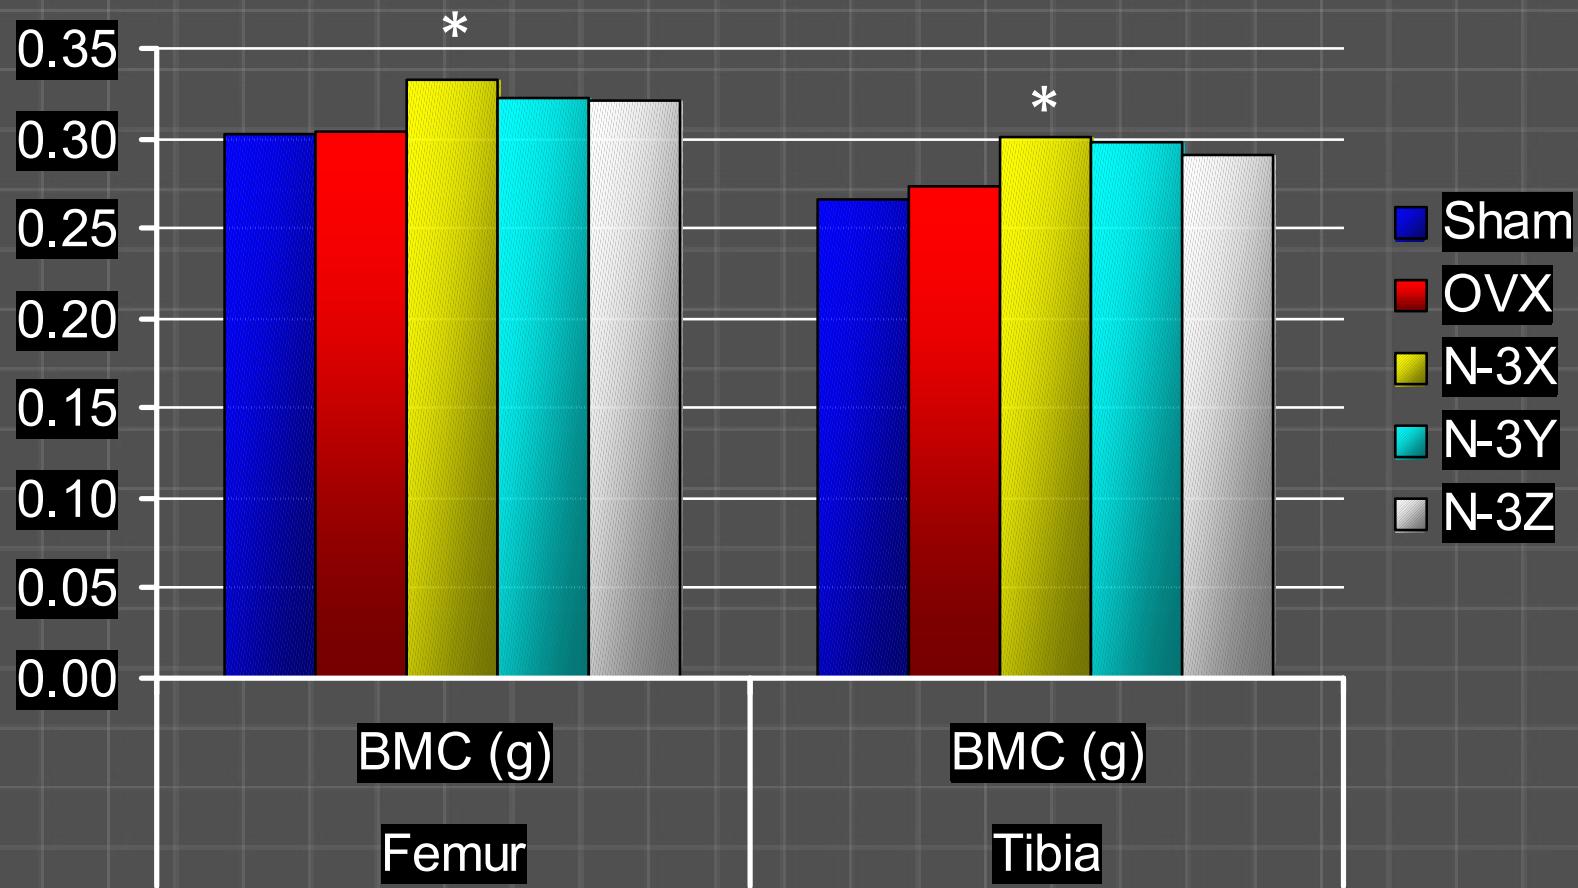

Osteoblasts COX-2 mRNA Expression: A = arachidonate, PUFA mixtures A and B

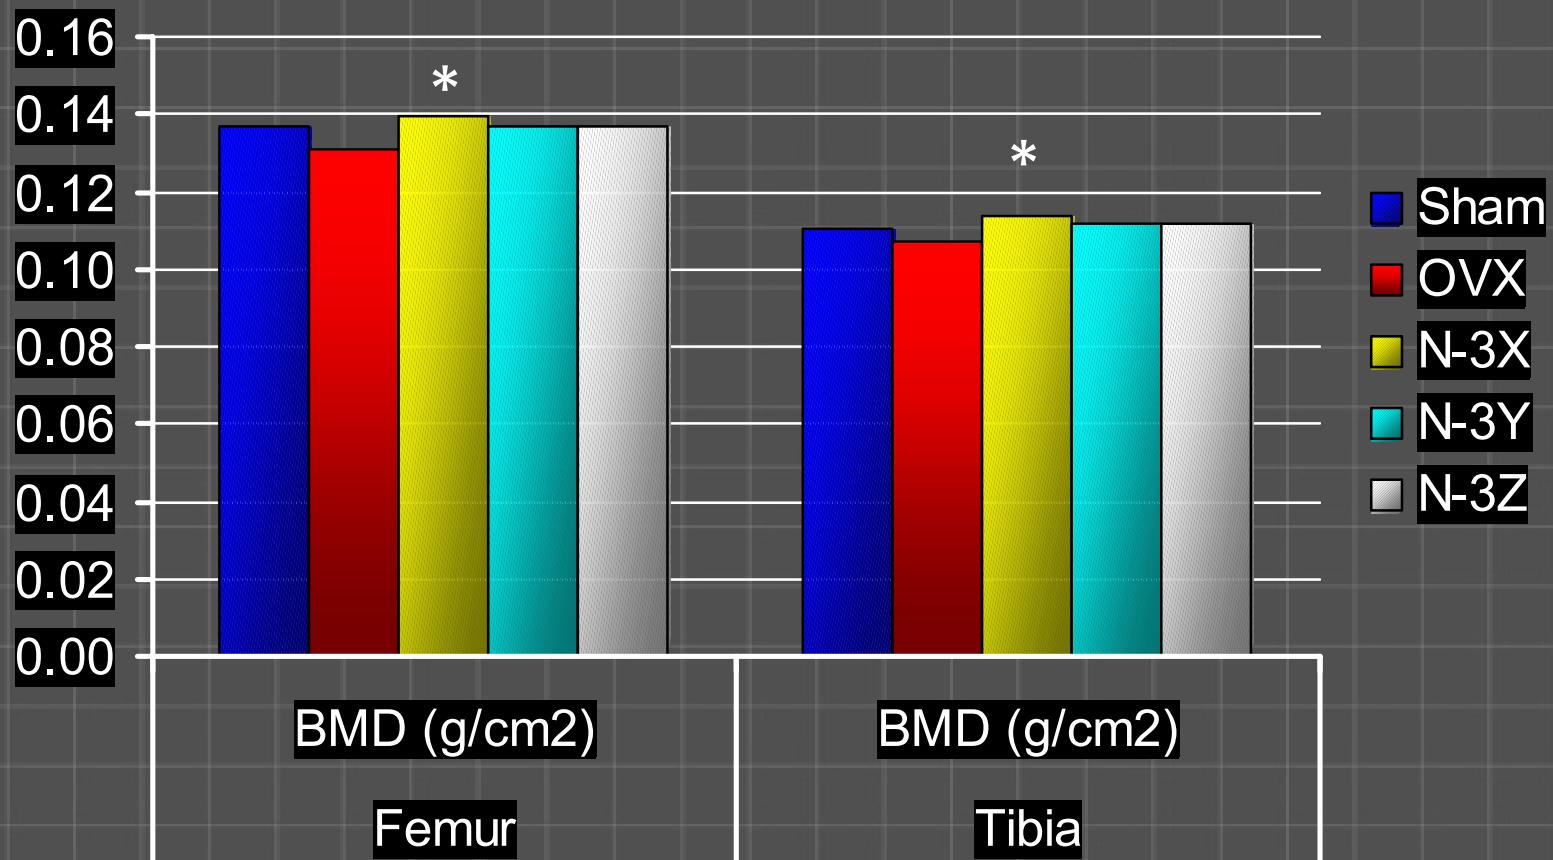

Gene Targets for Bone Health: Potential Actions of CLA on Cells of the Bone Microenvironment

Effect of PUFA-CLA Mixtures on Bone Mineral Content (BMC) in OVX Rats (7 wks dietary treatment)

Effect of PUFA-CLA Mixtures on Bone Mineral Density (BMD) in OVX Rats (7 wks dietary treatment)

Conclusions: Modulation of Gene Expression in Osteoblasts (OB)

Bone CLA Research Opportunities:

- The Cbfa-1 transcription factor – expression influenced by fatty acids, directed differentiation of marrow stromal cells (mouse)
- COX-2 activity and mRNA expression in OB modified by fatty acids and LC-PUFA; supported by data on ex vivo PGE production and bone histomorphometry (rat)
- Genes expressed during OB maturation (BALP) appear to be up-regulated by specific PUFA; supported by data on BALP in vivo and in OB cultures (dog, rat)
- Genes expressed during mineralization appear to be influenced by n-6/n-3 PUFA; supported by OB culture studies and in vivo bone modeling experiments (rat)
